安徽农业大学“青禾讲坛”2019年第1场读书报告会

发表时间：2019年3月22日 14:30

主讲：陈启华，安徽农业大学教授，安徽大学博士生导师，安徽大学图书馆馆长，安徽大学图书馆主任。

主题：从人生到人生——从读诗到读诗

嘉宾：安徽农业大学图书馆第一学术报告厅，安徽农业大学图书馆，图书馆馆长陈启华，人文社会科学中心，图书馆。

地点：图书馆报告厅，图书馆报告厅。

- PDF Reference
- Journal Article
- Strategic timetable scheduling for last trains in urban railway transit networks
- Kang L, Zhu X
- Applied Mathematical Modelling
- 2017 vol: 45 pp: 209-225
- Well-designed timetables, with appropriate coordination between the last feeder trains and the last connecting trains so that passengers can enjoy "smooth" transfers, are desired by passengers and are a major service goal of metro corporations. This paper addresses the strategically last train scheduling problem in
- more

Article Highlights:

- Two practical optimization models for last trains are developed.
- We design a new heuristic algorithm to solve the optimization models.

Highlights and make notes

A screenshot of the Mendeley Desktop application interface. The main window displays a research article titled "of young athletes" by T. Golditz et al. The article text is shown with several lines highlighted in pink. A yellow sticky note is attached to the highlighted text, containing a note about ankle stability. The right sidebar shows a "Notes" panel with a "GENERAL NOTES" section containing the text of the sticky note and a "PRIVATE ANNOTATIONS" section with a note from "Qingyong Woon". The application's menu bar and toolbar are visible at the top, and the Windows taskbar is at the bottom.

How do I use the new advanced search?

Last updated on 24/07/2018 01:46 PM

[▶ Performing an advanced search tutorial](#)

The new advanced search form offers an open design which allows you to specify one or more pieces of information (e.g., keywords, authors, dates, etc.) to find related documents in ScienceDirect. You can easily build an explicit query using multiple Boolean operators and nested clauses in your search.

None of the available fields are mandatory to an advanced search query. You are simply required to complete at least one field with searchable information.

特殊字符搜索

How to search for other characters

View the tips in the table below to see how to search for special characters

Character	Example
Spelling variations	Both British and American spelling variants are supported. A search for <i>colour</i> returns <i>color</i> , and vice versa
Greek letters and character equivalents	To search the Greek letter Ω , enter <i>omega</i> . This matches documents containing the word omega as well as the symbols Ω (uppercase omega) and ω (lowercase omega).
Subscript and superscript	Enter subscripted and superscripted characters on the same line as the other characters. To search for the chemical notation " H_2O ," enter H2O.
Accented characters	To search for the name <i>Fürst</i> , enter <i>Fürst</i> or <i>Furst</i> .
Non-alphanumeric characters	Characters such as bullets, arrows, daggers, and plus signs are ignored.

布尔语言搜索

Use Boolean operators to combine multiple terms:

- Boolean operators currently supported include AND, OR, NOT, and the hyphen (or minus symbol)
- Boolean operators must be entered in all uppercase
- The hyphen (or minus symbol) is interpreted as the NOT operator

For example: `black -hole` will return results containing 'black', but exclude any instances where 'hole' appears with it.

- Boolean precedence is as follows:
 1. NOT
 2. AND
 3. OR
- Parentheses can be used when nesting clauses so the grouping is clear

For example: For `a OR b AND c`, enter `a OR (b AND c)`

- Quotation marks can be used to specify terms which must appear next to each other

For example: `("heart attack" OR "myocardial infarction") AND diabetes AND NOT cancer`

[Show more](#)

<http://dx.doi.org/10.1016/j.neuroscience.2010.11.003> [Get rights and content](#)

Abstract

We previously reported that some main olfactory bulb (MOB) mitral/tufted (M/T) cells send a direct projection to the “vomeronasal” amygdala in female mice and selectively respond to volatile male mouse urinary odors. We asked whether MOB M/T cells that project to the vomeronasal amygdala exist in male mice and whether there is a sexually dimorphic response of these neurons to volatile male urinary pheromones. Gonadectomized male and female mice received bilateral injections of the retrograde

Amygdala

The amygdala is an almond-shaped structure located within the anterior portion of the temporal lobes, comprising a component of the limbic system and known to play a part in controlling emotion, motivation, and memory.

Back to previous page > Pyramidal tracts

Pyramidal tracts 1

The pyramidal tract exits the cortex, and after passing the pyramids of the medulla, the majority of these fibers cross to the opposite side and descend in the corticospinal tract through the spinal cord (Figure 3). Some of the fibers that do not cross over in the medulla travel ipsilaterally down the cord and cross to the opposite side in the neck or upper thoracic region.

Learn more about Pyramidal tracts 3

Spinal Tracts – Descending/Motor Pathways

Paul Rea, in *Essential Clinical Anatomy of the Nervous System*, 2015.

Pyramidal tracts

The **pyramidal tracts** are comprised of the corticospinal and **corticobulbar** tracts. These are called as **pyramidal tracts** as they crossover at the level of the pyramids in the medulla. They are collections of upper **motor neuron** fibers which go to the **spinal cord** (corticospinal) or the brainstem (corticobulbar) and control the motor function of the body.

The corticospinal tract is comprised of a ventral and lateral tract

Spinal Cord

Gulgun Sengul, Charles Watson, in *The Human Nervous System (Third Edition)*, 2012.

Corticospinal Tract

The corticospinal tract, also called the pyramidal tract because its fibers form the **medullary pyramids**, is found in all mammals with considerable variation between species. The dorsal corticospinal tract is the major corticospinal bundle, found in the **dorsal column** in rodents. In primates, it is highly developed and the major bundle is in the **lateral column**.

The fibers that give rise to the corticospinal tract in adult mammals arise from the **neurons** of the **precentral gyrus** and the **pa-**
